COLLECTION OF CTL DECISIONS

Standard:	**Sub clause:**	**Sheet n. 313**
IEC 61010-1:1990+A1:1992+A2:1995	14.6	**Page 1(1)**
Subject:	**Key words:**	**Decision taken by ETF3 and confirmed by CTL at its 38th meeting, in Toronto**
High Integrity Components, Note	- Integrity - Rating	

Question:

The note indicates that a resistor rated for twice the working power level can be considered to be high integrity, similarly it may be considered that capacitors with twice the rated voltage are high integrity. How is this note applied ?

Decision:

This note is not clear in its meaning and one is cautioned to take care in its use. A clear explanation should always be given when a component which is accepted as high integrity does not have an approval to a recognised standard for that purpose.

Explanation:

The note does not provide a comprehensive set of conditions to establish high integrity. Differing methods of construction may result in different lifetime expectation and different failure modes.
