# COLLECTION OF CTL DECISIONS

| **Standard:**<br><br>IEC 61010-1:1990 +A1:1992 + A2 :1995 | **Sub clause:**<br><br>9.2 | **Sheet n. 335**<br>**Page 1(1)** |
|---|---|---|
| **Subject:**<br><br>Temperature tests | **Key words:**<br><br>Steady state | **Decision n. 23 taken at 37th meeting/2000** |

**Question:**

In sub-clause, in 1st paragraph, what is meant by "steady state"?
Should this term be defined?

**Decision:**

Steady state is not defined in IEC61010-1. It has been agreed that where the temperature rise is not greater than 2°C in 1 hour then it is reasonable to conclude that steady state has been achieved. This limit is used in other safety standards for example IEC60601-1.

**Explanatory Notes**:

A part is regarded as having reached steady state temperature when the temperature rise over a
long period is almost negligible. The 2°C rise in 1 hour is considered a reasonable limit for this purpose.
