About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

Useful links:

IEC publications search - www.iec.ch/searchpub

The advanced search enables you to find IEC publications by a variety of criteria (reference number, text, technical committee,…).
It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available on-line and also once a month by email.
Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing more than 30 000 terms and definitions in English and French, with equivalent terms in additional languages. Also known as the International Electrotechnical Vocabulary (IEV) on-line.

Customer Service Centre - webstore.iec.ch/csc

Subject	**Keywords**	**Developed by**	**Approved at**
Applicability of test of subclause 9.1.4 for various AV terminals	Accessibility, AV terminal, Hazardous Live Parts	ETF 2	2017 CTL Plenary Meeting

Question

AV apparatus often incorporate a wide range of terminals for interconnection by user to other apparatus (examples shown below).

Are there certain types of AV terminals which can be generally considered as not having the risk of an electric shock (so that the test of sub clause 9.1.4 can be waived)?

Figure 1: double-pole terminal Figure 2: single-pole terminal Figure 3: bare wire terminal

Decision

No

During the test according to 9.1.4, not only the terminal but also the surrounding area is to be considered / tested - within 25 mm measured from each contact of the TERMINAL.

That means even if a special terminal is used there may be a gap within a distance of 25 mm of the terminal where a contact to hazardous live parts is possible. Therefore regardless of what kind of terminal is used, the test has to be conducted.

Explanatory notes

Non
