COMMITTEE OF TESTING LABORATORIES

DECISION SHEET

Standard(s)-(year and edition): IEC 60950:1999, IEC 60065	**Sub clause(s):** General	**Dec. No.** DSH-547
Subject: Standard for interactive terminals	**Key words:** STANDARD APPLICABLE	**Decision taken at the 41st CTL Meeting.**

Question:

Which standard shall be applied for type testing equipment as described below:

PRODUCT DESCRIPTION

INTERACTIVE TERMINAL / ACCESORY PEDESTAL FOR THE PAYMENT SYSTEM

The Interactive Terminal is a product that features components used on both industrial and personal computers. It has the capability to manage peripherals that process data (card readers, printers, coin comparators and Bank note validators).

The Interactive Terminal works as a "slave" of a "master" computer, through an ETHERNET connection.

The final application of the Interactive Terminal depends very much on the software installed on the "master" computer. Therefore, the final utilization to be given to the Interactive Terminal is a function of the intentions of the owner of the "master" computer installation/network.

Decision:

IEC 60950 is applicable as long as the product is not configured by the OEM's customer (reseller) and submitted specifically for an application covered under the scope of IEC 60335-2-75 (e.g., audio/video disc vending),

Explanatory Notes:

IEC 60950:1999, was chosen based on the similarity of the equipment described above with equipment included in IEC 60950:1999 scope, such as automated teller (cash dispensing) machines and point of sale terminals, including associated electronic scales and public information terminals. The scope of IEC 60335-2-75 includes very different equipment: "vending machines and dispensing appliances", such as cigarette vending machines, ice dispensers, commercial liquid heaters, that always have been under the scope of IEC 60335.
