COLLECTION OF THE CTL DECISIONS
DECISION SHEET

Standard(s): IEC 60950 (1999) 3rd Ed.	**Sub clause(s):** Scope	**Sheet No.:** **396**
Subject: Testing of Pluggable Type A multi-way power blocks containing MOVs and / or GDTs	**Key words:** - Scope	**Decision taken at the 39th meeting 2002**

Question:

Do you consider that Pluggable Type A multi-way (x4 or x6) power blocks containing Surge Suppression components are covered by the scope of IEC 60950?

Decision:

If the Power Block is an integral part of a product, subject to assessment under IEC 60950, then it could also be assessed to the same standard.

If the power distribution unit or power strip is a general use device intended for use with a variety of products, then the appropriate general use IEC standard shall be used.
